Syed Abrar Ahmad   **SP Lab # 7**
TAs: M. Hassan ,M. Usman, Hafiz Uzair

May 03, 2018

Solution: **Instructions**
If (youWant() == true) {   First, solve the problem.
  youCan();   Then, write the code.
} else { youCant(); }

QUESTION 1 (10)
 Implement **cp** and **mv** commands for Files.Your Program should take the source and destination address as given below
- Mycp.c sourceAddress DestinationAddress

Use the open(),read() and write System calls to implement the above question.For the Cp command just read the file from source address and write data to a newly created file of same name in destination address

For mv command after writing a data to a destination file you have to delete the original file from the source destination.

QUESTION 2 (10)
Write a program in which you have to read the /etc/shadow file,and then write data into the file given by the user as the command line argument.
Format of the command is given below
- programName.c path to file in which you have to write data

You have to make a new file at the given path with the user given name as argument and then write data in it.

QUESTION 3 (10)
Implement the following command
- Cat 1>newFile.txt
- Cat 0<f1 1>newFile.txt
